

**THE WORLD'S MOST
TRUSTED BUILDING CHEMICALS**

Project Infrastructure

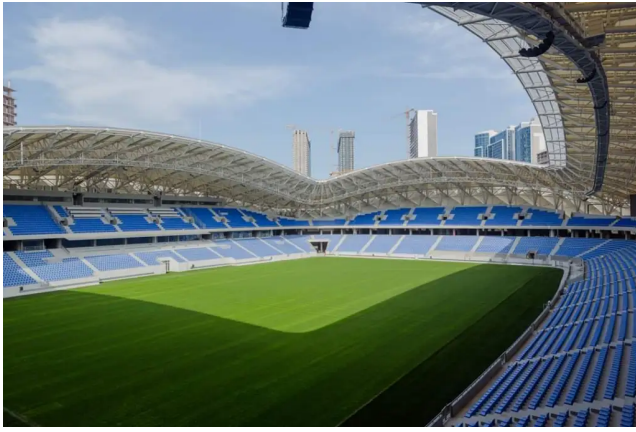

**Stadium Stands waterproofing and protection system based
on HYPERDESMO®
Batumi Stadium – Georgia**

Stadiums are stunning structures that are subject to many different loads, mechanical stresses and heavy pedestrian traffic. They require waterproofing with specific requirements in basements or car parks but mainly advanced waterproofing solutions for the exposed stand areas to avoid damages to the concrete, structural integrity and the corrosion of reinforcement. Moreover, the sealing of construction joints is extremely important in order to accommodate the structure's movement.

ALCHIMICA offers waterproofing, sealing and concrete protection solutions for hard traffic systems, based on the HYPERDESMO® liquid applied waterproofing membranes which are highly suitable for stadium stands, increasing their durability and offering waterproofing protection..

HYPERSEAL®-EXPERT-150 and the HYPERDESMO®-CLASSIC are one of the best solutions to Stadium Waterproofing and Concrete Protection requirements.

ALCHIMICA SOLUTIONS

The representative football stadium in Batumi, one of the most famous holiday destinations in Georgia, has a capacity of 20,000 seats. The design was confirmed to meet the UEFA category 4 requirements. As a modern stunning stadium has a modern architecture roof with the concept to be inspired by Georgia's passion for dance. With a total number of a 1,000 car parking area the stadium is extended in a 87,000 square meters.

ALCHIMICA's stadium stand waterproofing and sealing system applied in the specific project as a major solution.
