HYPERDESMO[®] AQUA is a specialized elastomeric waterproofing membrane/ coating of vertical and horizontal elements based on ALCHIMICA's unique water-based polyurethane technology, ideal for application to walls and roofs that are exposed to increasingly adverse weather conditions.

With top elasticity, durability and high resistance, it fully ensures the external protection of buildings located in sea or mountainous areas while at the same time contributing to their aesthetic upgrade.

The sustainable waterproofing, protection and paint solution of HYPERDESMO[®] AQUA, is directly linked to the energy efficiency upgrade of buildings.
