

**THE WORLD'S MOST
TRUSTED BUILDING CHEMICALS**

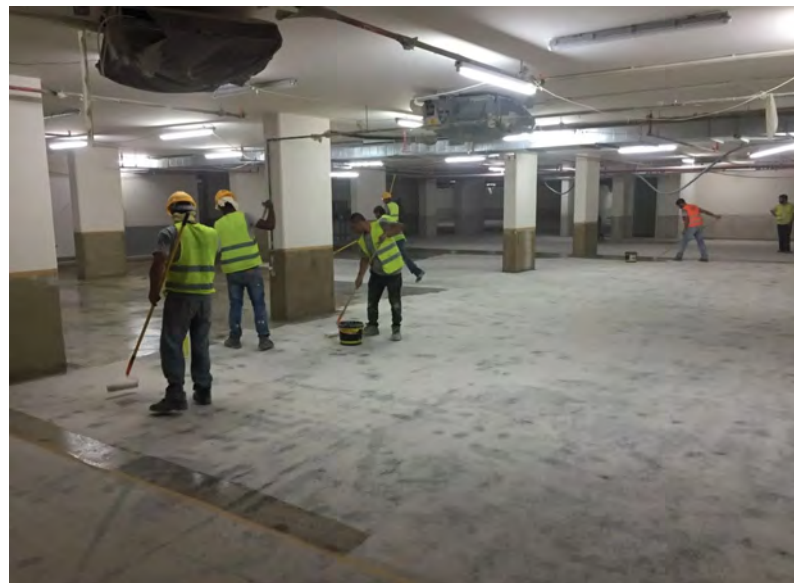

Project Commercial buildings

**Underground car park in Lebanon with
HYPERDESMO®-D-2K**

In this project, AQUASMART®-DUR the revolutionary two-component, water based, epoxy primer was applied, creating a slight film sealing the concrete and enhancing adhesion for the main coat. Then our HYPERSEAL®-EXPERT-150, the low modulus expansion joint sealant was applied, for detail sealing and carving of dilatation joints. HYPERDESMO®-D-2K was used as the main coat – a two-component, solvent-free polyurethane fluid, producing a strong hydrophobic membrane of moderate elasticity with outstanding abrasion and chemical resistance properties. At the end, AQUASMART® –TC 2K POOL PROTECT (pigmented at the desired colour) was used for the traffic line marking, creating a decorative flooring finish.

The result is a tough slip-resistance floor designed to resist high mechanical stresses and vibration forces.
